

# Aladin®

Say Hello to your magic connected lamp

Extending **autonomy**

“ Hello, nice to meet you ”

## Aladin makes your path secure at night

Thanks to its integrated movement sensors, Aladin illuminates your path with a progressive light in order to make your night movements easier.

For maximum efficiency, we recommend mounting on the wall :  
- either in your bedroom (next to or in front of the bed)  
- or in the hallway that leads to your toilet (or bathroom)

## ... and alerts a circle of dedicated people in the event of fall

Family, relatives, friends, neighbors or the telecare platform are directly alerted on their phones for a quick response which could minimize the consequences of the fall.

Alerts will be sent  
« in domino effect »  
to the phones of the 3 caregivers  
(family, neighbor, friend...)

Caregivers, who are designated by order of priority, are alerted by « domino effect », one after the other.

Example :

Configure the list of caregivers by using:

- your computer : <http://online.domalys.com>
- your tablet or telephone : Aladin by Domalys (IOS et Android)

## Additional features with the pack of 3 Aladin : Discover the PrediCare Technology® system

The simultaneous installation of the 3 Aladin units will enable an analyses of lifestyle habits and therefore hope to detect any irregular activity (disturbed sleep, frequent waking, important changes of temperature, etc).

PrediCare Technology®  
system available with a pack  
of 3 Aladin tower

Ideally, we recommend installing :

- one Aladin tower in your bedroom ①
- one tower in the corridor leading to the toilets (or bathroom) ②
- and one tower in the main room (living room or kitchen) ③

All the changes will be sent to caregivers' smartphones.

## ... and an alarm function

Thanks to its motion sensors, Aladin informs you in real time of any activity taking place within your home.

You will therefore receive different notifications :

- Fall alert
- Non-justified presence alert
- PrediCare® notifications

Credit photo : Adobe Stock  
\*Aladin does not substitute an anti-intrusion alarm system with remote monitoring

## Prevention hopes to make the future safer

You can use all your devices. Aladin Predicare Technology analyses (home temperature, decreased sleep quality, frequent waking, etc.) and therefore detects the early warning signs that may indicate illnesses.

**Help your GrandMa or GrandPa to preserve their autonomy.**

## Choose the telecare option

### In addition to Aladin, you will benefit from 24/7 home support

Are you a caregiver and need to rely on someone because you live far away or you are simply going on vacation ?

Aladin offers you a telecare option with our partner Filien ADMR.

#### **Filien ADMR, telecare with certified predicare call center**

The proposed solutions are modular and scalable in order to provide our seniors with assistance 24/7. Aladin automatically connects you to a call center which will alert the emergency services if necessary.

*Option to be activated on: <http://online.domalys.com>*

# Aladin options and accessories

## Customizable casings and facades

## Tablet with phone charger

## Floor stand

*Can't mount Aladin on the wall ? You can install it on a stand.*

# Installation simplified

1) Plug the bridge to your Internet box by using the Ethernet cable provided (if you have subscribed to the 3G key option, simply plug the key with your mobile operator card into the USB slot).

Box internet

2) Attach Aladin to the wall and plug into the electrical sockets

3) The Aladin light flashes first in orange before turning green. Everything is OK. Your Aladin tower are ready for use. Go to the app and invite the caregivers.

## Installation instructions are available online
